3	Wording	2

1 Introduction

We use three different section label names when referring to functions:

- 9 times we use full function:
 - `[constexpr.functions]`
 - `[defns.reserved.function]`
 - `[format.functions]`
 - `[global.functions]`
 - `[handler.functions]`
 - `[member.functions]`
 - `[pointer.traits.functions]`
 - `[replacement.functions]`
 - `[res.on.functions]`
- 9 times we use abbreviation `func`:
 - `[conv.func]`
 - `[fs.op.funcs]`
 - `[func]`
 - `[func.wrap.func]`
 - `[over.call.func]`
 - `[over.match.funcs]`
 - `[temp.deduct.funcaddr]`
 - `[temp.func.order]`
 - `[temp.mem.func]`
- 1 time we use abbreviation `fun`:
 - `[print.fun]`

Label abbreviation `fun` is inconsistent with established convention of using either full `function` name or the abbreviation `func`.

2 Proposal

Make `[print.fun]` consistent with other label names.

3 Wording

Rename the label of section 31.7.10 Print functions `[print.fun]` to `[print.func]`.
